History and physical exam suggestive of PH

- Echocardiogram
  - Suggestion of PH
    - With Group 2 disease
      - Degree of LHD can explain PH
      - Suspect PH out of proportion to LHD
        - RHC
          - Look for Group 1 cause: HIV, CTD evaluation, LFT (schistosomiasis, HGB, electrophoresis as indicated)
            - Group 1 cause found
              - Yes
              - No (reassess for other groups)
                - Yes
                - No
                  - IPAH or heritable
        - V/Q Scan +/- CTA
          - Group 4 disease established
            - Yes
            - No (reassess for other groups)
          - Polysomnography, PFT, ABG
            - Group 3 disease established
              - Yes
              - No (reassess for other groups)

- Without evidence of LHD (Group 2 disease)
  - Group 5 disease established
    - Suspicion of Group 5
      - Yes
      - No (reassess for other groups)

Assess disease severity and baseline (6-minute walk test, WHO class, BNP)

- RHC
